FLUID CONTROL SYSTEMS

Food Process

Clear, Clean, Experienced

Making Food Ideas Flow

Burkert is your partner in food manufacturing process control. We speak the language of foodstuff production and we have valuable experience in food applications, at OEM, contractor and plant levels.

We collaborate with you in the real physics of cooking, cleaning, water producing, filling, heating, cooling, separating or fermenting. We can share our experience in complete control loops for flow, conductivity, pH, temperature, pressure or level and can help you determine the most effective communications architecture.

Everyone in our organization is interested in listening to you with the aim of presenting you with only the most appropriate solution fluently in your daily application language.

In the food world where compactness, smart communication, plant footprint, wash-down and reliability are everyday concerns we provide process efficiency and higher yields by offering you unlimited process modularity.

Control

AirLINE

Our process actuation and control system integrates high performance solenoid pilot valves, remote electronic I/O and fieldbus communication. It is compact, extremely flexible and modular.

On/Off Process Valve Systems

Pioneering innovation has created a remarkable range of attractive and efficient valve and control modules, which can be combined to give you the best possible match for media from slurries to steam and from de-ionized water to hydrochloric acid.

Control Valve Systems

Modular designs allow high performance in wash-down process areas, and combine with advanced control possibilities, like decentralised electro-pneumatic on/off or continuous control, including in fieldbus communication systems. High life cycles counts are the norm with all Burkert process valves.

Temperature Transmitters and Sanitary RTDs

Burkert offers a full range of temperature measurement for the food industry. Our transmitters surpass all of the requirements of food processing and incorporate many unique smart features.

Full Bore Magflowmeters

For low- to high-flow continuous measurement or batch control. Type 8056 controls high precision dosing and filling when combined with a valve as its actuating element.

Radar Level Transmitters

Our non-contact radar level transmitter for continuous level measurement is particularly suitable for use in vessels that contain foodstuff liquids under sanitary process conditions.

Analytical Transmitters

Burkert has integrated sophisticated, simple-to-use controls into its pH and conductivity transmitters. These have event logging and industry standard conformance. Perfect for hygienic processes and your CIP environment, the new sensor designs use glass-free enamel technology, FDA approved materials and high surface finishes.

In-Line Conductivity and pH

Our in-line pH, conductivity and ORP transmitters are perfect for CIP applications in wash down environments. The program's modularity means you get exactly what you need for your specific application.
